DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Maekawa (JP404113960A).

Maekawa discloses a guide loop for a safety belt on motor vehicles comprising a guide element 76, 58 provided with a guide slit for the safety belt, which is fixed to a component of the vehicle body by a fixing screw 78 having a screw head and a screw shaft, and an adapter 112 having a displacement body, whereby the adapter is coupled to the inside of a fixing hole 58 of the guide element, and includes an opening 104 penetrated by the fixing screw 78 inserted through the fixing hole 58, the fixing hole being formed by a bore, whose cross-section is selected to be slightly larger than an external diameter of the screw shaft in order to maximize the overlap between a bearing surface of the guide element and the screw head of the fixing screw wherein the fixing hole 58 also includes a plurality of grooves 92 distributed about the circumference of the bore, into which fixing arms 105 of the adapter, pointing in an axial direction of the bore, extend when the adapter 112 is mounted to the guide element 76, 58. The fixing arms 105 include a hook-shaped structure at their free ends, the structure pointing outwards in a radial direction and engaging guide element when mounted. The fixing arms 105 or the hook-shaped structure are provided with a guide chamfer (see figure 1). The grooves 92 are evenly distributed around the circumference of the boring. The fixing arms 105 form a circle with a slightly smaller internal diameter than the

Application/Control Number: 10/553,571

Art Unit: 3616

internal diameter of the boring when the adapter is mounted. The fixing arms 105 are positioned relative to the displacement body in such a way that a basically constant slit height of the guide slit results when the adapter 112 is mounted. Regarding claim 2, the method of forming the device is not germane to the issue of patentability of the device itself. Therefore, this limitation has not been given patentable weight.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Faye M. Fleming whose telephone number is (571) 272-6672. The examiner can normally be reached on M-F (9:00-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Dickson can be reached on (571) 272-6669. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
